GAIN INSIGHT INTO YOUR ENDPOINTS WITH TOTAL WI-FI VISIBILITY

7SIGNAL® AGENTS

In order to effectively manage endpoint device performance, you need to be measuring connectivity from the end user's perspective.

An outside-in approach to monitoring and managing Wi-Fi offers full visibility into the health of your network and devices—and can even uncover additional opportunities for your business.

That's why organizations around the world trust 7SIGNAL. By providing fast and actionable root-cause connectivity data for Windows®, Android® and macOS® devices, 7SIGNAL's remote agent software make managing devices and Wi-Fi easier, enabling greater productivity throughout the enterprise.

100% visibility into wireless devices
7SIGNAL Agents provide timestamped feedback on the most common connectivity issues such as roaming, coverage, congestion and interference, allowing you to find and fix the root causes of endpoint Wi-Fi problems quickly.

Fast and easy SaaS deployment for the enterprise
The lightweight 7SIGNAL Agent application runs in the background on endpoint devices, with no impact on processing performance or battery life.

Safe and secure software
7SIGNAL Agents run on our secure cloud infrastructure and are GDPR compliant, ensuring the privacy and safety of your networks, devices and users.

Network, vendor and access-point agnostic
7SIGNAL is platform independent, offering flexibility with current and future network setups and assurance that you're receiving the absolute truth about the health of your Wi-Fi network and connected devices.
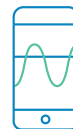

BEGIN YOUR FREE TRIAL

Experience the #1 solution for addressing connectivity issues across endpoint devices

Install the patented 7SIGNAL Agent application on the device

Passive and active tests run on user devices discreetly, with no impact on performance or productivity

Find and fix connectivity issues as they happen to ensure optimal performance of applications and devices
